

# White Glove “Professionals in Cleaning and Sanitizing”

Dear Facilities Management, Property Owners:

The Coronavirus (COVID-19) has spread throughout the world and professional cleaning practices play an important role in reducing the chance of spread. But many facilities are not prepared. **White Glove** has compiled some of the most useful information to help you deal with this fast-spreading virus. As well as incorporating additional solutions to help combat the spread of this infectious disease.

**White Glove** will proceed with a team of experienced technicians for specialized disinfecting services. In conjunction we have and will continue to maintain all proper guidelines that OSHA and The Centers for Disease Control and Prevention (CDC) mandate for EPA approved disinfectants. The objective is to move forward with a simple, cost effective and easy to implement protocol and application system.

*Introducing Our Smart Touch Technology and the electrostatic charge system  
It disinfects as it leaves the spray nozzle, causing each droplet to become  
Powerfully attracted to its opposite charge on such high-touch areas as desks,  
Table tops, chairs, door handles, cabinet handles, light switches and more. By incorporating this advanced  
technology, you will be afforded a healthier and more cost-effective approach to managing these deadly viruses.  
Allow us to effectively proceed with the following protocols:*

*To deep clean and disinfect all possible touch points in all environments with the goal of eradicating the coronavirus (Covid-19). This level of cleaning follows those recommendations from the CDC (Centers for Disease Control and Prevention)*

DISINFECT with success of 99.999% kill rate for 38 strains of Coronavirus

- Reducing the source of destructive and infectious microorganisms
- Continuous, proactive protection to all surface and touch points.
- Antimicrobial protection to textiles
- Reduce hand-to-hand and hand-to-surface cross contamination.

In our efforts to serve you better, White Glove is pleased to announce that we will be vigorous with this specialized service to help manage the health and safety to all customers.

We strive to make your job easier. This service is just another step in our efforts to provide the very best sanitizing to our clients.

Respectfully Submitted

# White Glove “Professionals in Cleaning and Sanitizing”

## BIOPROTECT™ ANTIMICROBIAL SURFACE PROTECTANT

BIOPROTECT™ is an EPA registered water-based, antimicrobial technology that provides persistent and continuous protection. BIOPROTECT™ is a preservative antimicrobial coating that can be applied to both porous and non-porous surfaces to inhibit the growth of odor causing, and stain causing bacteria.

### HOW IT WORKS

When applied to a surface or incorporated into a material, BIOPROTECT™ forms a covalent bond with the substrate and creates a micro biostatic antimicrobial coating. The coating forms a nano-bed shield of spikes (self-assembling monolayer), each of which carry a positive charge that attracts the negatively charged bacteria. Once attracted, the molecular spikes pierce the cell and rupture its cell membrane, causing that bacterial microorganism to die.

### FOG & GO

Just spray, mist or fog BIOPROTECT™ onto a surface directly from the electrostatic sprayer or Fogger sprayer, it's as easy as that! No rinse is required, even for food surface contact, and protection begins in 60 seconds and remains effective for up to 30 days.
